

BIG PARTNERSHIP FORMED
The Baldwin Locomotive Works and the Westinghouse Electric Company Combine.

Twenty Millions Involved
The Concerns Will Manufacture Electric Motors to Replace the Use of Locomotives.

A NEW ERA IN RAILROADING
The Machines Have Been Given a Provisional Patent and Found to Be Effective.

A \$20,000,000 combination was formed to-day, and with it, the electric era of railroading has begun. The Baldwin Locomotive Works, of Philadelphia, and the Westinghouse Electric Company, of Pittsburgh, have formed a partnership, which is expected to revolutionize the electric traction on the American railroads. The plan is to build electric locomotives to be used instead of the steam locomotives, which, by the way, are considered to be inefficient and will, in the future, be replaced by other machines. The Baldwin Locomotive Works and the Westinghouse Electric Company, it is believed, will combine their resources and produce a new type of electric locomotive. The Baldwin Locomotive Works, it is said, will produce the locomotives, and the Westinghouse Electric Company will produce the electrical apparatus. The partnership is expected to be one of the most important ones of the year. The Baldwin Locomotive Works, it is said, has been making a large amount of money since it was reorganized. The Westinghouse Electric Company, it is said, has also been making a large amount of money since it was reorganized. The partnership is expected to be one of the most important ones of the year. The Baldwin Locomotive Works, it is said, has been making a large amount of money since it was reorganized. The Westinghouse Electric Company, it is said, has also been making a large amount of money since it was reorganized.

PAINTED IN THE CHAIR
The chair of the electric chair is painted in the chair.

BREK. TILKAGE HEAD
The head of the electric chair is broken.

THREE WENT DOWN
Three men went down in the electric chair.
